

Essentials of algebra complete course an adequate preparation for the college or technical school for secondary schools

Filesize: 7.14 MB

Reviews

Certainly, this is the finest work by any article writer. It really is full of wisdom and knowledge You will not sense monotony at at any time of your own time (that's what catalogs are for concerning should you ask me).

(Marion Mann DDS)

ESSENTIALS OF ALGEBRA COMPLETE COURSE AN ADEQUATE PREPARATION FOR THE COLLEGE OR TECHNICAL SCHOOL FOR SECONDARY SCHOOLS

To save **Essentials of algebra complete course an adequate preparation for the college or technical school for secondary schools** eBook, make sure you follow the button below and download the document or get access to other information which are have conjunction with **ESSENTIALS OF ALGEBRA COMPLETE COURSE AN ADEQUATE PREPARATION FOR THE COLLEGE OR TECHNICAL SCHOOL FOR SECONDARY SCHOOLS** ebook.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 64 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 Excerpt: . . . We have seen that the first numbers known were whole numbers; that by extending the process of division fractions were conceived; that by extending the process of subtraction negative numbers were conceived; and that by extending the process of evolution surds and finally imaginary numbers were conceived. In the investigations of higher mathematics the imaginary number plays an important part. 157. Division of imaginary numbers. Imaginary numbers in division should first be reduced to the typical form. Then, in general, multiply both dividend and divisor by such an expression as will make the divisor real and rational. Example 1. Divide 6 by j^4 . $6 \div j^4 = 6i \div i = 6$ and -3 . 158. Geometric representation of imaginary numbers. According to the method of Chapter XIII all real numbers may be represented by distances measured along the line XT from the point O, positive numbers by distances to the right, and negative numbers by distances to the left. Let us consider any positive number, say 2, represented by OA. By revolving OA counter clockwise about the point O it may be made to take the position of OB, OC, OD, or any other line drawn through O. Now, multiplying 2 by i gives $2i$. Multiplying again by i gives -2 , which is represented by OC in the figure. Hence, multiplying 2 twice by i gives the same result as revolving OA into the position OC; i. e., reverses the direction of the line which...
