RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 52 pages. Original publisher: Urbana, IL : Coordinated Science Laboratory, College of Engineering, University of Illinois at Urbana-Champaign ; Washington, D. C. : National Aeronautics and Space Administration, 1990 OCLC Number: (OCoLC)67157552 Excerpt: . . . 3 alpha particles. In 5 , a simulation technique for modeling the ion shunt effect was developed. An approximate analytic solution which models a current tran-sient was developed in 6 . The model includes parameters which represent the w maximum current, the collection time constant of the junction, and the time con-w stant for initially establishing the ion track. The analytic solution was validated L s w by comparison with other computer models and is used in this study. A series of experiments, aimed at error analysis through the physical inser-tion of faults, was conducted by several investigators at the NASA AIRLAB test w bed facility. An experiment to study fault latency distributions through hardware W fault injections is described in 7 and 8 . Information gathered from these stu-dies shows that the data generated can provide considerable insight into error manifestation. Another useful study is 9 which describes a simulation experi-w ment to determine the efficiency of a number of error-detection mechanisms. In 10 , an approach to expose upsets in a computer system by abstraction verification is described. More recently in 11 , physical fault injection was used to validate a computerized interlocking system for the French railways. At the microprocessor level, studies have primarily focused on vulnerability assessment and software detection methods. An assessment of different transient error test methods is presented in 12 . In 13 , a detailed analysis of the vulner-ability of the ZS0 microprocessor based on ion bombardment testing is described. This item ships from...
